

# ENGINEER AND ENVIRONMENTAL PROFESSIONAL CONTINUING EDUCATION SERIES

**2 PDH  
CREDITS**

## Bioengineered Living Shoreline Erosion Control Technology (1 PDH)

A 1-hour overview of SOX Erosion Solutions, Bio Engineered "Living Shoreline" Erosion Control Systems. Learn how this system immediately stabilizes shorelines, adds aesthetic value to the property, improves the natural ecosystem, and eliminates safety risks for workers and maintenance staff.

- Fundamentals of soft armor shoreline repair and restoration
- Installation and anchoring methods
- Independent testing and use cases

## Robust, High Performing Engineered Perimeter Control System (1 PDH)

A 1-hour overview of the SOXfence® Silt & Sediment Control system. Learn how this next generation of multi-functioning protective project fencing reduces water encroachment, retains sediments, and serves as a containment barrier while creating a safe and healthy environment for wildlife and aquatic habitats.

- Sediment control, turbidity barriers and landslide mitigation
- Installation and anchoring methods
- Independent testing and use cases

SOX Erosion Solutions develops, manufactures and distributes of a suite of patented Bio-Engineered "LIVING SHORELINE" erosion control systems that halt soil erosion and re-stabilize shorelines and hillsides using a patented technical mesh employing a rip-stop technology and anchoring system proven to withstand the forces of nature while providing a healthy environment to support and sustain vegetation. All of our systems are lightweight, open-ended and design flexible, that ultimately allows our system to take any desired shape or size. SOX provides education, training and support to our national network of CSPs (Certified Service Providers) on how to spec, bid, sell, and install our patented erosion control systems.
